# Nazmun Nahar

🜎 oceanrahan | in Nazmun-Nahar | 🏶 Portfolio | 🔽 oceanrahan@gmail.com | 🖡 +8801670802317

### Research Interest

Human Centered Computing, NLP, Information Retrieval, Data Science

## Work Experience

Principal Research Engineer 2021 - Present

MedAi Health Limited

Assistant Programmer 2021 - 2022

Janata Bank PLC

Lecturer 2019 - 2020

Bangladesh Institute of Science and Technology

#### Publications

- Shariar Kabir; Nazmun Nahar; Mamunur Rashid; Shayamasree Saha."Automatic Speech Recognition for Biomedical Data in Bengali Language" arXiv preprint arXiv:2406.12931 (2024).[pdf]
- Nazmun Nahar; Shariar Kabir; Sumaiya tasnia khan; Suparna Das; Shyamasree Saha; Mamunur Rashid. "AmarDoctor: First Multilingual Digital Platform For AI-Driven Primary Care Triage And Patient Management System For Bengali Speakers". (Working on). [pdf][suppl. data]

## AWARDS & ACHIEVEMENTS

• AmarDoctor by MedAi Health has been selected as one of the six solvers out of 2200+ participants worldwide for the MIT Solve 2024 Global Health Equity Challenge Award for its innovative approach to accessible healthcare. Source

#### EDUCATION

Bachelor of Science 2015 - 2019

Computer Science and Engineering

Bangladesh University of Engineering and Technology

- Project & thesis: Bengali Text Recognition Using Deep Learning, under the supervision of Professor Dr. Md. Monirul Islam. For this project, I created a word image dataset from printed documents, annotated it, then trained deep neural networks on it using a variety of methods, including CNN, RNN, LRU, and others. .
- Coursework: Artificial intelligence, Structured programming language, Object oriented programming language, Data Structures, Algorithms, Database, Computer architecture, Software engineering and information system design, Software development, Basic graph theory and others

#### Projects

#### Symptom Checker & Clinical Decision Support System

[Demo]

This is an intelligent module that, in both Bengali and English, refers patients to the appropriate specialist physicians based on their identified signs, symptoms and concerns. Additionally, it prepares a preliminary diagnosis for physicians as part of ongoing research on the accuracy of our system's disease identification

#### Medical Assistant Chatbot

[GitHub]

People can discover doctors who can aid them with their concerns by using this conversational chatbot. Patients may find it challenging to decide which expert to see, but this medical assistant AI BOT makes the process easier by suggesting physicians who focus on mental or physical health. This was created using the **RASA** framework, which is based on **NLU**.

#### Fine Tuning a Stable Diffusion Model

[GitHub]

To enhance user experience and provide more visually appealing symptom icons, I fine-tuned a Stable Diffusion model to generate custom **vector arts** for image data. This process involved preparing images, generating preliminary captions with image-to-text model, curating the captions, and training a Lora model.

#### Bengali Clinical NER (in progress)

To automate the process of generating structured clinical notes, we are working on to develop a comprehensive Clinical Bengali NER system. This system aims to retrieve clinical entities like symptom, disease, diagnostic test, medicine and duration from patient-provided text or voice data. However, a major obstacle is the lack of a comprehensive Bengali patient-physician conversation dataset. To overcome this challenge, we have collected real patient data and are working to annotate and train this dataset for effective context aware medical information retrieval.

#### Amazon Web Services

I have significant experience in cloud engineering. I deployed our back-end servers on **EC2 instances** and configured **API Gateway** to enable API access. Additionally, I have experience with various AWS services including **S3 buckets**, **Route 53**, **AMI**, **AWS NLB**, **VPC and SES**.

#### Django Back-end

Created a complete Django back-end using **TypeDB**, **PostgreSQL**, **SQLite** and a **REST architecture** for our healthcare platform, **AmarDoctor**. A significant portion of my work was designing databases, systems and other infrastructure in addition to creating and managing APIs.

#### SKILLS

Programming Languages Python, C, C++, Java, SQL, PostgreSQL, TypeQL

Natural Language Processing NER, NLU, LLM, RASA, NLTK

Machine Learning Tensorflow, Keras, PyTorch, Huggingface Trnasformers, Diffusers

Data Science Pandas, Matplotlib, NumPy

Software Development DRF, Firebase, VOIP notification, Swarm Locust, API testing EC2, Route53, S3 bucket, API Gateway, SES, Load balancer, vpc

Others Git, Bash script, Web Scraping, Sphinx, Jira, Confluence
